RELIABLE PERFORMANCE.

Ecofresh Air Purifier is the only technology that guarantees the delivery of fragrance in the air continuously, consistently and accurately for the entire duration of the cartridge life. This precise technology is based on a fuel cell technology that is used in the pharmaceutical industry to deliver drugs to human beings and animals.

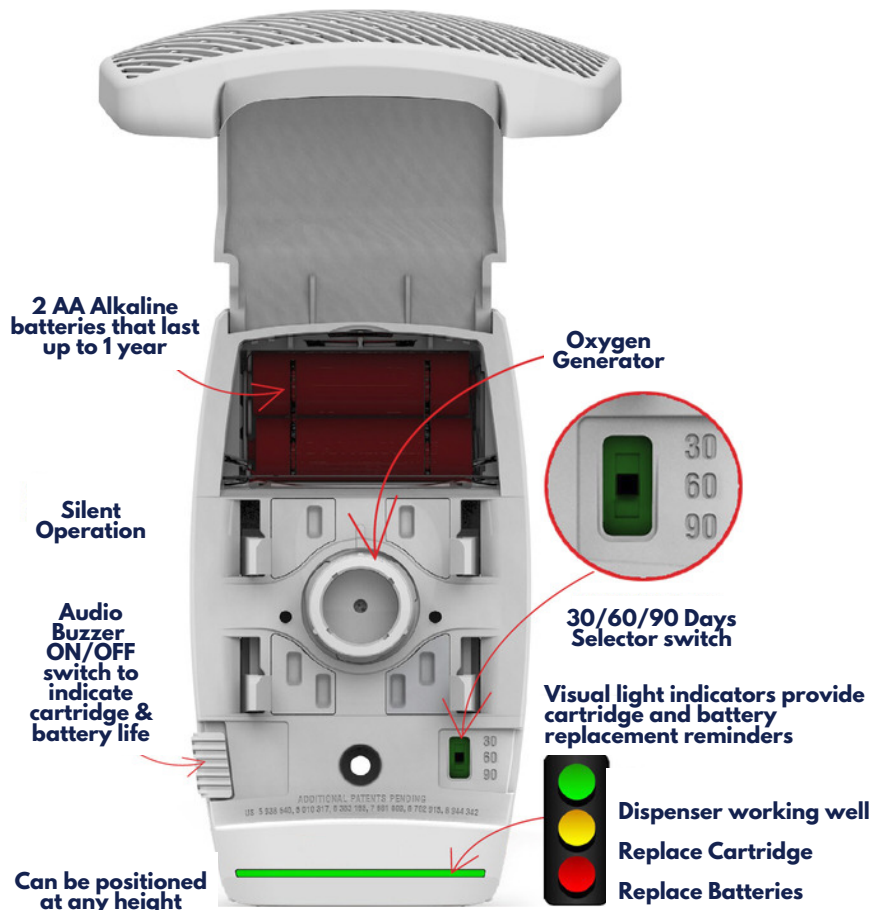

Ecofresh Air Purifier is **simple, reliable and cost-effective.**

Another great feature of the product is the management and reminder system as it alerts when the cartridge needs to be replaced.

One less problem to worry about!

ONE DISPENSER

Ecofresh Air Purifier is the perfect odor control system for any establishment as the user can program the dispenser to work for **30, 60 or 90 days**, and can select different fragrance intensity levels with the flexibility of two different cartridge sizes to choose from.

TWO CARTRIDGES

ECONOMICAL

The Regular cartridge works for 30 days and is the ideal choice to replace aerosols, gels, sprays or other passive systems. The cartridge contains 20 ml of pure fragrance oil which amounts to about 4 times more fragrance oil than a standard metered aerosol can.

LOWEST COST-IN-USE

When using the Grande cartridge, the dispenser can be programmed to work for 30 days, 60 days or 90 days. The cartridge contains 35 ml of pure fragrance oil, that is approximately 7 times more fragrance oil than a standard metered aerosol can. The fragrance intensity can be changed to a strong (30 days), normal (60 days) or (90 days) mild scent.

Regular Cartridge
30 Days

Grande Cartridge
30/60/90 Days

The dispenser automatically detects the Grande cartridge and works as per the chosen setting. The Regular cartridge works for 30 days immaterial of the programmable switch position. The Oxygen-Pro cartridges are available in a wide range of fragrances and are compliant with CARB, EU, IFRA and REACH regulations.

SAFE.

With no added solvents and no alcohols, the Cartridges contain 100% pure fragrance oil and are a safe choice for any facility. Since the cartridges are not pressurized containers, they are safe to transport and store.

ECO-FRIENDLY.

Unlike aerosols, the Oxygen-Pro system does not contain any CFCs, has no added VOCs or propellants, no 'spray and fade effect' and 'no noise'. A fresh, constant level of fragrance is released continuously, consistently and discreetly. The cartridges can be safely disposed of in a plastic recycling bin at the end of the cartridge life.

EFFECTIVE FRAGRANCE & ODOR ELIMINATION.

All cartridges contain **Neutra-lox**, a proprietary ingredient that works with fragrance oils on targeted malodors by locking in the malodor molecules, neutralizing them and releasing a pure, fresh scent into the air.

Neutra-lox is extremely effective against the smell of urine, feces, body odor, tobacco, pet malodor, kitchen odor, mold and mildew, etc.

Unlike other systems that only mask odors, Oxygen-Pro cartridges eliminate odors and release fragrance effectively.

Buzzer Switch

Regular Cartridge
30 Days

SPECIFIC MALODOR ELIMINATORS

For facilities that desire specific malodor eliminators without any fragrance or a very low fragrance, a choice of two new cartridges are available.

Neutra-lox *Malodor Eliminator*

An extremely high concentrate of neutra-lox with just a hint of lemongrass fragrance. This is the ideal choice for areas where fragrance is not desired.

Kleer Natural *Malodor Eliminator*

Kleer uses plant oils as the active ingredient to neutralize malodors. With a blend of 100% plant oils, Kleer is the ideal choice for health care facilities and hotel rooms to eliminate odors without releasing any fragrance.

AIR-CON FILM

A CONTROLLED RELEASE PRODUCT THAT DIFFUSES TEA TREE OIL VAPOURS CONTINUOUSLY, IMPARTING ANTIBACTERIAL, ANTIVIRAL & ANTI FUNGAL PROPERTIES TO THE AMBIENT SPACE.

INTRODUCTION

Air-Con Film purifies the air in enclosed indoor spaces, by combating airborne microorganisms such as bacteria, viruses and mold spores, through the controlled release of Tea Tree Oil, renowned for their natural, powerful antibacterial, antiviral and antifungal properties. Air-Con Film is made of pure Tea Tree Oil encapsulated in a biodegradable polymer gel matrix, which upon contact with air flow, activates to release the Tea Tree Oil. The oil subsequently vaporizes to impart a purification effect to the ambient space. Besides air purification, Air-Con Film is also effective in controlling mold growth on furniture, walls, ceilings and ventilation air ducts. Since Air-Con Film utilizes only air flow to diffuse the Tea Tree Oil vapors, it is hence safe, convenient, user friendly and environmental friendly. It is specifically designed to be flat and flexible to ensure invisibility during application. To use Air-Con Film, it is sufficient to place it within diffuser air vents or central air conditioning systems. The polymer gel in the film gradually diminishes, and eventually disappears at the end of treatment. Each Air-Con Film lasts up to 4 weeks in use (assuming 12 hour HVAC operation).

SPECIFICATIONS

Air-Con Film has the following specifications:

Length: 185 mm

Width: 92 mm

Weight: 30 grams

Appearance: Silver, flat sachet with 4 plastic tabs

Packaging: Individual aluminum foil packaging with treatment intensity adjustment tabs; 75 pcs per carton

Scent: Light, fresh, minty scent, characteristic of Tea Tree Oil

UNIQUE FEATURES

- With controlled release function
- With treatment intensity adjustment feature
- Continuous air cleaning and purifying effects up to 3 weeks
- Made with 100% pure Tea Tree Oil
- Free of alcohol, solvents and chemicals
- Flat, flexible form
- Invisible upon application
- No equipment or mechanical installation required
- Safe
- User friendly
- Environment friendly

AIR-CON FILM

APPLICATION

Air-Con Film is packaged in an innovative intensity adjustable packaging. The packaging has 4 windows, with which the user can select and adjust the treatment intensity desired, by opening the corresponding numbers of windows. For mild treatment, open 1 window. For moderate treatment, open 2 windows (Ensure one opened window is directly behind the other opened one) Open 3 windows for a strong treatment and for an intense treatment, open all 4 windows or remove Air-Con Film from its packaging.

In round and square type diffuser air vents:

Ensure there is air blowing out from the air vent. After opening the desired number of windows on the packaging, slot Air-Con Film into the air vent. Ensure the film is positioned perpendicular to the direction of air flow. The weight and shape of the Air-Con Film keeps it in position even under strong air flow.

In linear type diffuser air vents:

Ensure there is air blowing out from the air vent. Remove Air-Con Film from its packaging and slot it into the air vent. Ensure the film is positioned perpendicular to the direction of air flow. The weight and shape of the Air-Con Film keeps it in position even under strong air flow.

For central air conditioning systems:

Open all 4 windows on the Air-Con Film
Place Air-Con Film into the Film Holder provided. Position the Film Holder near to the cooling coils. If the Film Holder is placed on the condensate drain pan, ensure the condensate water does not come in contact with the Film Holder. The Film Holder keeps the Air-Con Film in position and prevents it from getting caught up in the moving parts of the system.

Attention:

Do not place Air-Con Film in exhaust vents. When Air-Con Film is initially applied, the light, fresh, minty scent characteristic of Tea Tree Oil will be noticeable. This scent gradually declines over the treatment period. Once the characteristic scent is not perceivable, it means that the Air-Con Film is depleted. At this point, it is recommended to apply a new Air-Con Film for continued treatment.

APPLICATION RATES

Each Air-Con Film treats an enclosed area of approximately 200 square feet, with standard ceiling height. For larger areas, the number of films should be increased accordingly, preferably, evenly scattered throughout the entire area. If a stronger activity is required, the number of films can be increased accordingly. Likewise, for a lower activity level, the number of films should be reduced accordingly. Apply a new film once every 3 weeks (assuming 12 hour HVAC operation) or as and when the characteristic scent of Tea Tree Oil is no longer detectable.

SAFETY

The product is made with 100% pure Tea Tree Oil and plant based polymers. There is no addition of alcohols, propellants and solvents. The product is packaged only with biodegradable or recyclable materials.

STORAGE

Store product in a cool dry place, in its original packaging. Take special care not to puncture the package during handling and transportation. If the packaging is compromised, the product has to be discarded.

AIR-CON FILM

DISPOSAL

Dispose of product accordingly to local regulations. Do not reuse internal packaging. Dispose internal packaging once the product is consumed. External packaging can be offered for recycling or reconditioning.

HANDLING

It is normal to find some scent oil deposit within the aluminum foil packaging. Product is safe for handling with bare hands. Wash hands with soap and water after handling.
